

diet-rm

file removing utility

Gael Le Mahec

February 22, 2010

Version 1.1

Abstract

diet-rm can remove a file. This command takes in argument the path of the file in the following form `|host|:|path|`.

1 Synopsis

diet-rm [**-config** *diet_config_file*] *file*

2 Description

diet-rm uses the configuration file *diet_config_file* defined with the **-config** option to be able to get information about the *host* where we want to remove the file. If the **-config** option is not set, *diet-rm* will use `$HOME/.diet/client.cfg`. If this file does not exist, the path to the client configuration file could also be defined with the `DIET_CLIENT_CONFIG` environment variable.

diet-rm will remove the file in the *file*.

[**-config** *diet_config_file*] Configuration file used by *diet-rm* to remove the file on *host*. This option can be omitted. In that case we fall back to the default configuration file `$HOME/.diet/client.cfg`. The configuration file path could also be defined through a environment variable : `DIET_CLIENT_CONFIG`.

file The file to remove. It is of the form `|host|:|path|`.

-h|-help Some help about *diet-rm*

3 Files and variables

\$HOME/.diet/client.cfg Default configuration file for *diet-rm*.

DIET_CLIENT_CONFIG Variable that could store the path to the *diet-rm* configuration file

OMNIORB_CONFIG Variable defining the path to the omniORB configuration file

4 Example

How to remove a *file* called *foo* on the *bar* machine?

diet-rm -config path_to_the_configuration_file bar:foo
